Deep gripping forceps

Many teeth to be extracted have already a weakened crown due to a previous caries/filling treatment. Our Deep gripping forceps avoid complica?ons like crown or root fractures.

Standard Forceps

Deep gripping forceps

Advantages of Deep Grip Forceps

Longer and sharpened conical jaws

Less punctual stress on the damaged crown due to: dozens of connecting points on crown and root structure:

Perfect anatomical shape for a parallel contact :

Less soft tissue trauma by sub gingival placement of the jaws. Soft tissue is more retracted than squeezed

ROUTURIER extraction forceps

These special extraction forceps allow you to access easily the lower molars because of their anatomic angulated shape and their slim and compact design. Especially capable for patients with a restricted mouth opening.

Black Finish Coating

Design meets functionality.
Users with highest demands will appreciate the elegant, black fi nish providing the instrument with a non-refl ecting, extremely smooth and scratch-resistant surface. The article number is complemented by TI.

1

PATENTED

12.234.07ZTI

Diamond Version

All RoBa-Edition extracting forceps in the classic satin-metallic fi nished surface are available with diamond coating for a better grip.
The lower part of the Handle is gold-plated. For ordering etc., just add a D to the article number.

Premium scissors

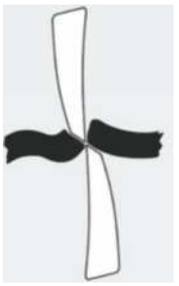

special steel and hardening
precise cutting from the tip along the whole blade
smooth cutting

SC scissors (SuperCut)

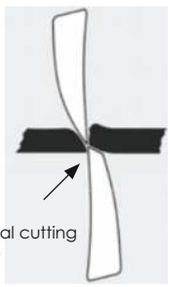

very sharp — less effort and trauma due to a special cutting edge
one blade micro serrated to avoid suture and tissue slippage
one handle gold coated

TC scissors

long durability due to Tungsten carbide inserts on both blades, especially for hard sutures
both handles gold coated

Ordinary scissors

SC scissors

info@surponemedi.com

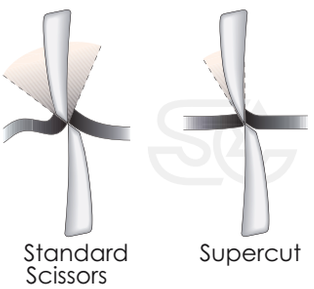

03140737600

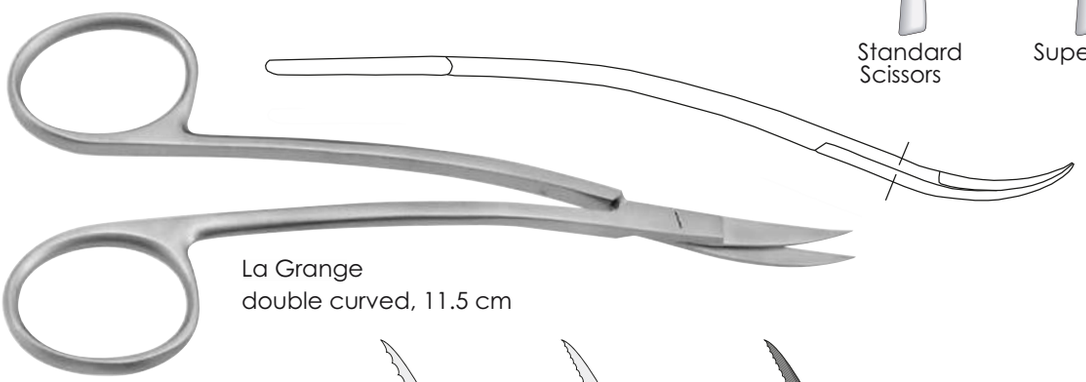

What is Super Cut

SC stands for "Supercut" and means that scissors with that designation have been specially ground, not only to make them sharper than ordinary scissors, but yields a much better cutting angle (cf. the accompanying illustrations).

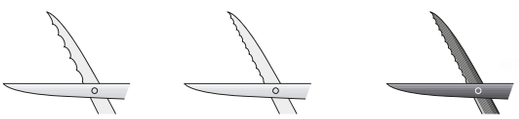

What is TC

TC stands for "Tungsten Carbide", a material whose superior strength wear resistance and hardness are its major properties that distinguish it from conventional materials.

Fine Preparation Scissors

The curved blunt Preparation Scissors are used for preparation in the least traumatic way of separating tissue into connective tissue layers.

The surgeon pushes the scissor parallel to the skin or to the level of the layers which should be separated (picture 2), opens the scissor and pulls it back in an opened position.
The tissue layers are separated by spreading movements of the scissor blades and the required layer is opened (picture 3).
The tip of the scissor is usually facing the less sensitive structures.

In the second instance the scissor is used for cutting.

Implant holding tweezers

Implants, abutments and small parts fall down and it is not possible to grab them up safely With the implant holding twee-Zers this unpleasant part belongs to the past, due to the three-fin-ger-tip. Titanium is the material of choice, to prevent the surface of the implants and abutments fom damages.

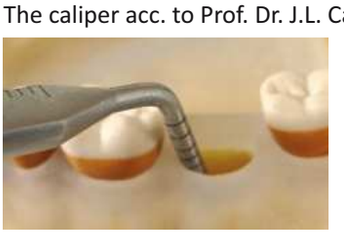

SM-1734-1
7,0 mm

SM-1734-2
9,0 cm

Messlehre . Caliper

The caliper acc. to Prof. Dr. J.L. Calvo Guirado Facilitates the positioning of Implants.

The tips of the instruments serves to determine the depth of the osteotomey. Scaling at the ?p of 8 / 10 / 11,5 / 13 / 15 / 17 mm in order to place the implant

Inserting implants gets much easier anf effective due to caliper acc. To prof. Dr. Med. Dent. Gisbert krekeler. Working is safer, faster anf more precise by the combination serverl fuctions in one instrument.

Measuring gauge 0-10cm SM-7516

For a maximum stability always the widest possible implant Diameter should be chosen. Due to the exactly 1,5 mm measu-Ring rods, you can read the maximum diameter directly. Due to Scientific research in order to avoid bones resorbtion atier the Implantological treatment, there should be a wall of at least 1,5 mm of bone material to each side.

Measuring gauge
0-10cm
SM-7517

Due to the multi functional character it is very easy to set an implant. The measuring rods allow a fast and defined control of parallel and symmetrical distances between implants in distal and mesial direction. The hole at the end of the sliding callipers serves as a drilling gauge, drilling guide and depth measurements

Crown spreader

With the crown spreader it is possible to spread o ffcrowns without rotationon the root underneath, in order to protect the nerve.

The crown is getting slotted with a burr.

Insert the plier into the slit, according to its position from occlusal, buccal or lingual.

The crown is getting spreaded securely and anatomically correct by compressing the plier. The advantages of the instrument are:
there is no rotation on the root or
pressure on neighbor teeth. ;
